

Serial No:10/688053
Docket No: Rennich-001

AMENDMENT IN THE CLAIMS

Claims 1-20 (canceled)

Claim 21 (new):

An external incontinence clamp that is removably attachable to a penis for selectively controlling the discharge of urine through the penis, the incontinence clamp comprising:

a pair of clamping members each having opposed ends and a mid portion extending between the opposed ends, said pair of clamping members being arranged generally parallel and about said penis with said opposed ends extending past the width of said penis and with said mid portion of each clamping member in contact with said penis;

a pair of pins; and

said pair of clamping members being secured together at said opposed ends by said pair of pins and about said penis to apply a predetermined clamping force to said penis to prevent the passage of urine therethrough, and one of said pins being selectively disengaged from one clamping member to allow the passage of urine through said penis and then being reengaged to prevent passage of urine.

Claim 22 (new):

The external incontinence clamp as recited in claim 21, wherein each pin of said pair of pins includes two legs extending from a bridge portion to generally define a U-shaped pin; further wherein each of said opposed ends of each clamping member of said pair of clamping members includes a passage way which extends therethrough along the width of said end; and wherein said legs of said pins are frictionally received by said passages to secure said pair of clamping members at said opposed ends and in a generally parallel and spaced distance about said penis.

Claim 23 (new):

The external incontinence clamp as recited in claim 21, wherein one opposed end of one of said pair of clamping members includes a slot formed through said opposed end along said passage way thereof; and further wherein one of said pins is selectively disengaged

Serial No:10/688053
Docket No: Rennich-001

from said clamping member by removing one leg of said pin from said opposed end through said slot.

Claim 24 (new):

The external incontinence clamp as recited in claim 23, further comprising:

a pad positioned about each of said mid portions of said pair of clamping members.

Claim 25 (new):

The external incontinence clamp as recited in claim 23, wherein said bridge of each of said pair of pins is bent at a mid point thereof.

Claim 26 (new):

The external incontinence clamp as recited in claim 25, wherein the degree of said bend of each bridge portion is adjustable to control the amount of said clamping forced applied to said penis.

Claim 27 (new):

The external incontinence clamp as recited in claim 21, wherein each of said pair of clamping members are rigid.

Claim 28 (new):

The external incontinence clamp as recited in claim 21, wherein said penis is not punctured or pierced by said clamp.

Claim 29 (new):

A male incontinence clamp for temporary attachment to a penis for selectively controlling the discharge of urine through the penis, the incontinence clamp comprising:
a pair of clamping members each having opposed ends and a mid portion extending between the opposed ends, said pair of clamping members being arranged generally parallel and about said penis with said opposed ends extending past the width

Serial No:10/688053
Docket No: Rennich-001

of said penis and with said mid portion of each clamping member in contact with said penis;

a pair of pins;

said pair of clamping members being secured together at said opposed ends by said pair of pins and about said penis to apply a predetermined clamping force to said penis to prevent the passage of urine therethrough, and one of said pins being selectively disengaged from one clamping member to allow the passage of urine through said penis and then being reengaged to prevent passage of urine; and

wherein said pair of pins are non-piercing or non-puncturing to said penis.

Claim 30 (new):

The incontinence clamp as recited in claim 29, further comprising:

a pad positioned about each of said mid portions of said pair of clamping members.

Claim 31 (new):

The incontinence clamp as recited in claim 29, wherein each of said pair of clamping members are rigid.

Claim 32 (new):

The incontinence clamp as recited in claim 29, wherein each pin of said pair of pins includes two legs extending from a bridge portion to generally define a U-shaped pin; further wherein each of said opposed ends of each clamping member of said pair of clamping members includes a passage way which extends therethrough along the width of said end; and wherein said legs of said pins are frictionally received by said passages to secured said pair of clamping members at said opposed ends and in a generally parallel and spaced distance about said penis.

Claim 33 (new):

The incontinence clamp as recited in claim 32, wherein one opposed end of one of said pair of clamping members includes a slot formed through said opposed end along said

Serial No:10/688053
Docket No: Rennich-001

passage way thereof; and further wherein one of said pins is selectively disengaged from said clamping member by removing one leg of said pin from said opposed end through said slot.

Claim 34 (new):

The incontinence clamp as recited in claim 33, wherein said bridge of each of said pair of pins is bent at a mid point thereof; and the degree of said bend of each bridge portion is adjustable to control the amount of said clamping forced applied to said penis.

Claim 35 (new):

The incontinence clamp as recited in claim 29, wherein the length of each of said pair of clamping members is sufficient so that said opposed ends of said clamping members are free from contact with said penis.
